Assignment #1

Due   Feb 16 by 11:59pm   **Points**   10   **Submitting**   a text entry box or a file upload
Available   until Feb 16 at 11:59pm

This assignment was locked Feb 16 at 11:59pm.

Using PHP:

1. Write a function that:

- Given a numerical parameter in input, computes and prints all the prime numbers up to that value.

  Example:

  > If input parameter is 10, output is "2, 3, 5, 7"

  > If input parameter is 100, output is "2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, 47, 53, 59, 61, 67, 71, 73, 79, 83, 89, 97"

2. Write a "tester function" that:

- Given a specific subset of inputs, tests the function described above (point 1).

  Example, in pseudo code:

```
tester_function:
    is output from prime_function(10) equal to "2, 3, 5, 7"? If yes, test passed
    is output from prime_function(0) equal to ""? If yes, test passed
    ...
```
